

13485Academy vs. online competitors

Use our comprehensive comparison matrix to choose whether or not to implement ISO 13485:2016 on your own, utilizing numerous online sources for your documentation. This matrix also outlines the 13485Academy suite of products and services and how they compare to those of competitive online suppliers. Take a look and select for yourself which alternative fits the requirements of your company.

Compare the advantages and disadvantages of searching online for each piece of ISO 13485 documentation versus the comprehensive list of documents and professional assistance we offer at the 13485Academy.

Online competitors	13485Academy
Documentation you'll find online is a clutter of exhaustive policies and procedures that were typically generated for big corporations.	Our templates were developed and designed particularly for small-scale to mid-sized businesses. This means we don't include irrelevant matter you don't want, and every single document is optimized and easy to adapt.
You have to purchase the whole documentation toolkit at once.	We provide each document separately. And, if you at any time decide to buy the complete toolkit, your individual payments for each document you had paid will be taken off. No need to pay for the ones you already purchased.
Other online suppliers merely supply the toolkit, but offer no support.	We deliver four different services that are included in the price of the toolkit: (1) a professional consultation via phone or Skype, (2) review of your finalized documentation, (3) unlimited email support, and (4) specific guidance regarding what is mandatory and what can be deleted from the documents.
"We'll just utilize the free documentation templates that we found on the internet." Regrettably, these free resources merely encompass about 20% of the documentation requirements, with no assistance.	Our document templates include 100% of the documents required by ISO 13485:2016, with assistance on how to finish them.
